

Expanding Green Spaces for a Pleasant City (Establishment of Seoul Green Trails)

Direction

By 2026, Seoul aims to connect green spaces (forests, parks, gardens, and green areas) throughout the city in an organic linear manner to enhance pedestrian accessibility to parks and green spaces, actively addressing the demand for green leisure.

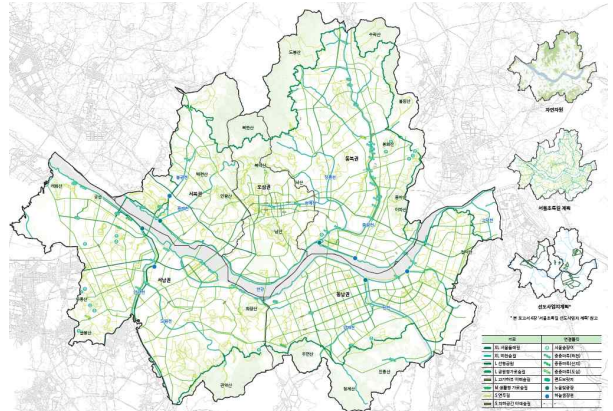

□ Expanding Green Spaces for a Pleasant City

○ Establishment of Seoul Green Trails

- Since 2022, Seoul has been driving forward the "Seoul Green Trails Project," which links over 2,000 kilometers of forests, parks, gardens, and green areas across the city organically. By 2026, our goal is to create new paths where needed, maintain existing ones, and bridge disconnected routes to enhance pedestrian access to parks and green spaces. This proactive approach aims to meet the demand for green leisure, ensuring that everyone can readily enjoy nearby green areas for healing and relaxation, particularly as citizens have been fatigued by the prolonged COVID-19 pandemic.
